- 10 30. (New) A hollow, elongated, structural member comprising:
a plurality of elongated hollow pole sections secured together in an end-to-end
relationship;
each of said hollow pole sections comprising a plurality of longitudinally extending
peripheral sections joined together;
15 each of said peripheral sections having upper and lower end edges and first and
second side edges;
each of said peripheral sections having first and second vertically extending break
lines formed therein adjacent said first and second side edges respectively to
20 form longitudinally inwardly extending first and second edge portions;
each of said peripheral sections also having a plurality of spaced-apart longitudinally
extending break lines formed therein between said first and second break lines
to form a plurality of angled wall sections between said first and second break
25 lines;

1

said edge portions of said peripheral sections being bolted together by bolt members
to form a hollow pole section;

5

the angled wall sections immediately adjacent said first and second break lines of said
adjacent peripheral sections defining an externally presented general V-shape
therebetween.

10

31. (New). A wind turbine tower, comprising;
a plurality of elongated hollow pole sections secured together in an end-to-end
relationship;

each of said hollow pole sections comprising a plurality of longitudinally extending
peripheral sections joined together;

each of said peripheral sections having upper and lower end edges and first and
second side edges;

15

each of said peripheral sections having first and second vertically extending break
lines formed therein adjacent said first and second side edges respectively to
form longitudinally inwardly extending first and second edge portions;

20

each of said peripheral sections also having a plurality of spaced-apart longitudinally
extending break lines formed therein between said first and second break lines
to form a plurality of angled wall sections between said first and second break
lines;

25

said edge portions of said peripheral sections being bolted together by bolt members
to form a hollow pole section;

1

the angled wall sections immediately adjacent said first and second break lines of said adjacent peripheral sections defining an externally presented general V-shape therebetween.
